

CARE GUIDE

Thank you so much for choosing Pruskin Hardware!

INSTALL:

For knobs and regular handles: use a 5mm - 3/16" drill bit for the holes. For appliance pulls, use a 1/4" drill bit. The handles are all signed on one side for correct orientation.

When installing appliance pulls vertically, for example on a refrigerator, **please orientate the pulls so that the signature is on the top.**

The screw sizes are 8/32" for the standard hardware and 10/32" for the appliance pulls, if you need to purchase more.

CARE:

Pruskin Hardware has a living finish and as such, has no protective coating, apart from the wax that is applied to the hardware before delivery. They are expected to change over time, either darkening, becoming increasingly matte, or becoming shiny in areas of high use.

Clean with a damp cloth, and if desired, occasionally re-wax with a paste wax such as Minwax Paste Finishing Wax.

Avoid using cleaning products that contain bleach or vinegar. Such products can aggressively impact the patina.

Polished hardware benefits from an occasional buff with a clean soft cotton or microfiber cloth after cleaning. If the surface has become dull, use MAAS metal polish (available locally) to restore shine and then if desired, re-wax the surface. For this kind of cleaning, the hardware may first need to be removed.

We hope that you enjoy our hardware for many generations to come.

Yours sincerely,

Pruskin Hardware
